

EVIDENCE

Proof at the moment the decision is made.

Evidence produced when the authority decision is made, configured around the requirements you already have.

WHAT WE KEEP HEARING

Firms want full decision-trace reconstruction, queryable in real time: what an agent did, why, what data it accessed and who is accountable.

Evidence assembled by hand and manually implemented policy rules won't scale to ten or a hundred times today's usage. Boards, regulators and assurance teams need confidence in AI use without full access to chat logs, prompts or sensitive content.

WHAT NUGGETS DOES

Each enforcement decision produces an Action Receipt: a tamper-evident record of the agent, delegated authority, requested action and applicable policy, showing whether the action was allowed, denied or escalated.

Receipt contents are configured around the firm's evidence requirements. Risk teams, auditors or supervisors can verify them independently, without Nuggets in the loop.

Nuggets covers the authority and policy part of decision-trace reconstruction, not the full trace. Receipts can be verified without exposing prompts, customer records or underlying data to the reviewer.

PILOT SCOPE

Agree the receipt contents with your risk function up front, run a multi-step workflow, then hand them a set they can verify themselves.

OUTCOME

Less manual evidence reconstruction.
